VERIFIED PREVIEW NOTE

Beyond Wealth

Population card correction

The old dashboard export sums each country population across 25 years and shows 53.0bn. The corrected Power BI measure counts selected countries in the latest visible year only: 2.397bn for the full 2024 selection.
The dashboard pages after this notice are the prior visual export.

Corrected calculations are in the browsable Power BI project and documented in README.md.
Re-export from Power BI Desktop to replace the prior dashboard pages with updated visuals.

GLOBAL HEALTH INTELLIGENCE

Beyond Wealth

How prosperity translates into longer lives—and where the relationship breaks down.

WORLD BANK DATA

2000–2024

REGION

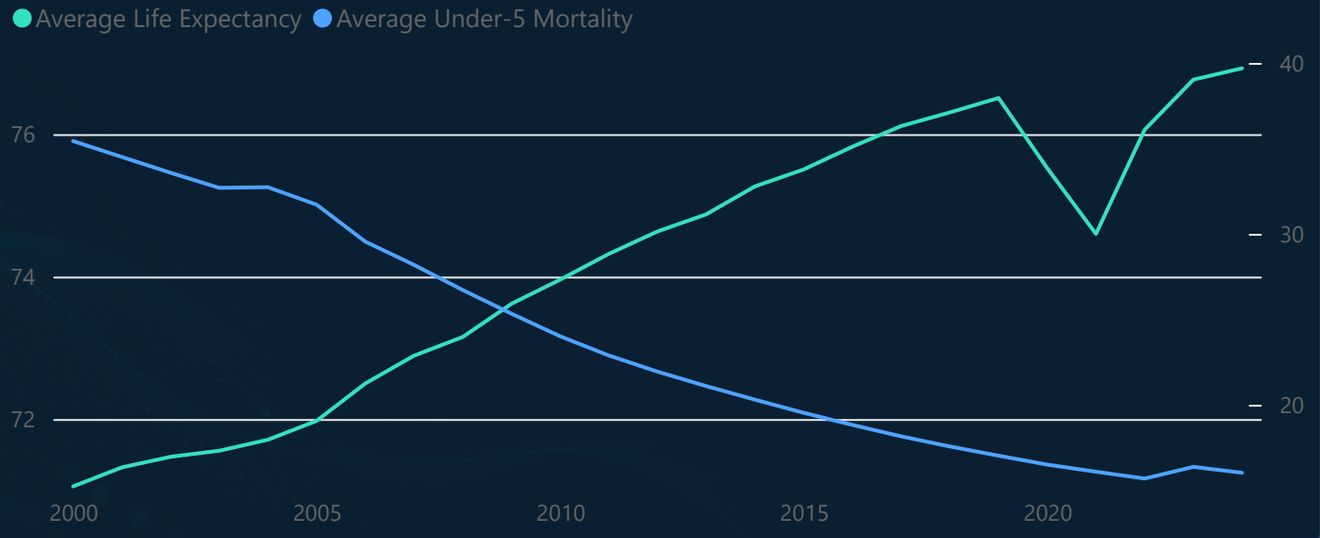

All

YEAR

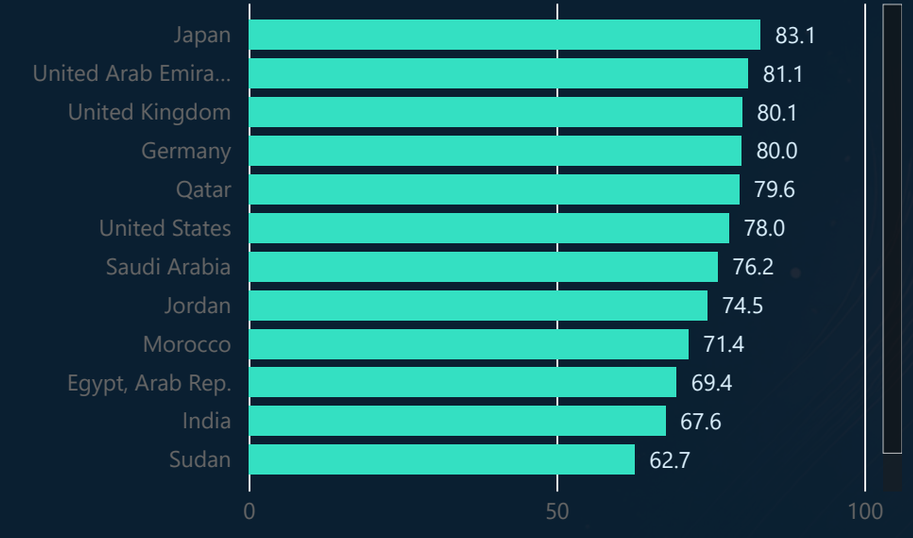

All

LIFE EXPECTANCY · YEARS	UNDER-5 DEATHS · PER 1K	GDP PER CAPITA · USD	POPULATION REPRESENTED
74.2	23.7	$25.3K	53.0bn

Two outcomes, one story · 2000–2024

Life expectancy · country ranking

ANALYTICAL LENS

Does wealth buy health?

Each bubble is a country-year. Position reveals the relationship; size adds population context.

WORLD BANK DATA

2000–2024

REGION

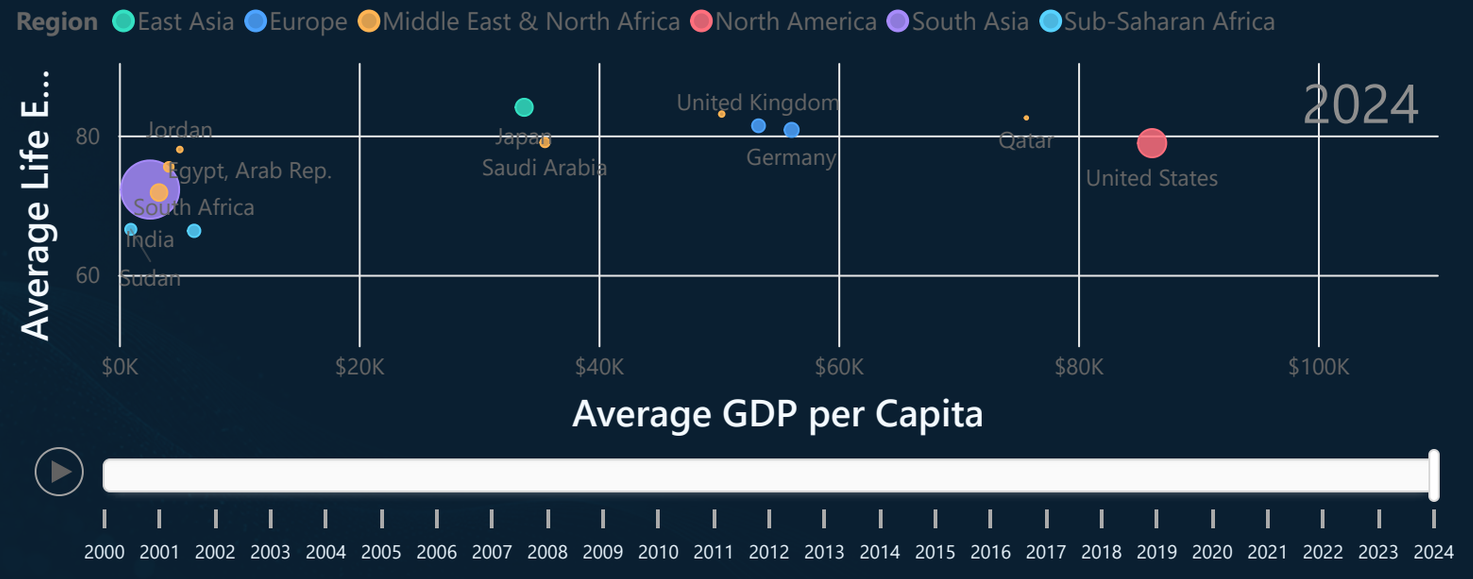

All

YEAR

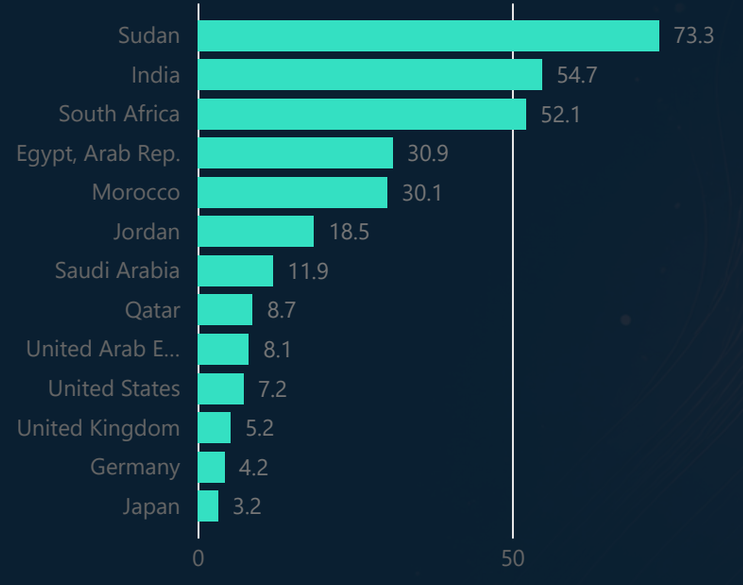

All

HEALTH EFFICIENCY INDEX	YEARS BEHIND BEST	GDP PER CAPITA · USD	POPULATION REPRESENTED
7.3	8.9	$25.3K	53.0bn

The prosperity curve · GDP vs life expectancy

Child mortality · highest burden

INTERACTIVE PROFILE

Country Explorer

Select a country and year range to reveal progress, prosperity, and remaining health burden.

TRANSPARENCY BY DESIGN

Methodology & Sources

A trusted analytical product should be as rigorous as it is beautiful.

WORLD BANK DATA

2000–2024

WHAT THIS DASHBOARD ANSWERS

How strongly do income and population-level health move together?
Which countries outperform their economic position?
Where has child survival improved fastest?
How wide is the remaining gap to the best performer?

DATA FOUNDATION

Source: World Bank Indicators API
Grain: country × year
Coverage: 13 countries, 2000–2024
Rows: 325 complete country-year observations
Indicators: life expectancy, under-five mortality, GDP per capita, population

METRIC DEFINITIONS

Life expectancy: expected years of life at birth.
Under-five mortality: deaths before age five per 1,000 live births.
Health efficiency: life expectancy divided by ln(GDP per capita).
Gap to best: years below the strongest life expectancy in the selected comparison set.

INTERPRETATION GUARDRAILS

Association is not causation. National averages conceal inequality.
GDP is current US dollars and is not purchasing-power adjusted.
The latest complete common year is 2024 across all 13 selected countries.
Use this project to demonstrate modeling and storytelling—not causal policy evaluation.
